1 Rubbish

We all produce rubbish every day. Our food, drinks, the water we use for cleaning and the toilet, our food wrappings, drink bottles, they all produce rubbish.

Many people live in our planet (earth) and we all produce rubbish every day.

The amount of rubbish that we have all produced over the years is so big that it has become a problem.
We are making our planet dirty and unhealthy.

Our food and water comes from our land.

When the land is full of rubbish our food and water are unhealthy, animals die and we get sick.

We need to reuse and recycle our rubbish so that us and everything else in our planet can live healthy and happy.
